

## STANDARD charging station

HOME > KATEGORIE > CHARGING STATIONS FOR ELECTRIC CARS > STANDARD CHARGING STATION

STANDARD plug charging stations are intended for charging electric cars in private homes and at companies, restaurants and hotels. They do not have a settlement and payment system, so they are intended for customers who need devices of the highest quality, reliability and high safety standards. They are perfect for installation in places where there is no need to sell electricity, but only a flat-rate charging service is provided.
