

CONSOLES AND CONTROL PANELS

We design from scratch, select the appropriate form, model the internal equipment, complete the final product, test it and perform the commissioning.

Control consoles types and applications:

- **Marine** - designed for installation on the bridge of vessels or ships.
- **Control** - these are centralised stations that allow the management of the various areas relevant to the workstation.
- **Alarm** - whose primary task is to report abnormalities, e.g. in the functioning of a machine or in the processes taking place.
- **Information** - which mainly collect data and monitor the performance of the equipment and systems concerned.

Available materials:

- From any type of steel
- From the catalogue and according to individual needs
- In corrosivity classes **C1 - CX**.
- Degree of protection **IP 44 - 68**.
- Impact resistance **IK08 - 10**

ELECTRICAL CABINETS AND SWITCHGEARS

We have extensive experience in the prefabrication of electrical switchgears. For many years, we have been supplying switchgears to large utilities, substations, power and industrial plants around the world. Apart from maritime transport, switchgears are used in the military industry, railway transport, chemical industry, food industry and general production.

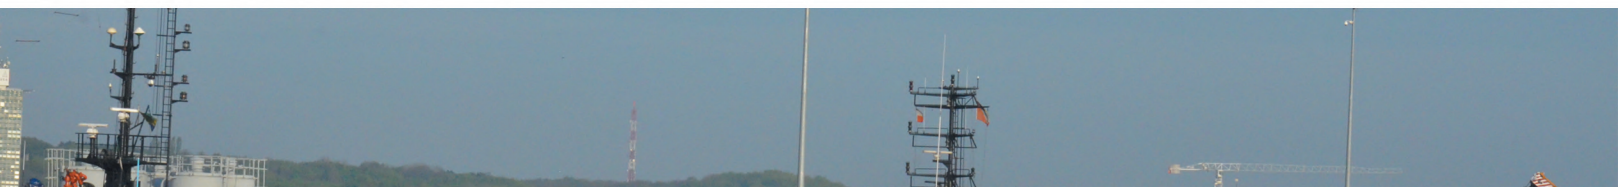

Examples of electrical cabinets and switchgears designed and manufactured in our company.
